Department of Artificial Intelligence & Data Science

Aim: Implement Bi-Gram model for the given Text input

Objective: To study and implement N-gram Language Model.

Theory:

A language model supports predicting the completion of a sentence.

Eg:

- Please turn off your cell _____
- Your program does not _____

Predictive text input systems can guess what you are typing and give choices on how to complete it.

N-gram Models:

Estimate probability of each word given prior context.

$P(\text{phone} \mid \text{Please turn off your cell})$

- Number of parameters required grows exponentially with the number of words of prior context.
- An N-gram model uses only $N-1$ words of prior context.
 - Unigram: $P(\text{phone})$
 - Bigram: $P(\text{phone} \mid \text{cell})$
 - Trigram: $P(\text{phone} \mid \text{your cell})$
- The Markov assumption is the presumption that the future behavior of a dynamical system only depends on its recent history. In particular, in a k th-order Markov model, the next state only depends on the k most recent states, therefore an N-gram model is a $(N-1)$ -order Markov model.

N-grams: a contiguous sequence of n tokens from a given piece of text

Mary was scared because of the terrifying noise. ...

Fig. Example of Trigrams in a sentence

▼ Parts of Speech

▼ Tag|Meaning|English Examples

ADJ|adjective|new, good, high, special, big, local

ADP|adposition|on, of, at, with, by, into, under

ADV|adverb|really, already, still, early, now

CONJ|conjunction|and, or, but, if, while, although

DET|determiner, article|the, a, some, most, every, no, which

NOUN|noun|year, home, costs, time, Africa

NUM|numeral|twenty-four, fourth, 1991, 14:24

PRT|particle|at, on, out, over per, that, up, with

PRON|pronoun|he, their, her, its, my, I, us

VERB|verb|is, say, told, given, playing, would

.|punctuation marks|. , ; !

X|other|ersatz, esprit, dunno, gr8, univeristy

```
text = "TON 618 (short for Tonantzintla 618) is a hyperluminous, broad-absorption-line, radio-loud quasar and Lyman-alpha blob located ne

Conclusion:

A bi-gram model is a language model that examines sequences of two adjacent words in a given text. By analyzing word pairs, it captures some level of contextual information. However, it has limitations, such as ignoring longer-range dependencies and lacking semantic understanding. Bi-gram models can be useful for simple tasks like text prediction or basic sentiment analysis, but for more advanced NLP applications
